

VISUAL *Enterprise* Extensions

2010 Product Guide

The “Data Dictionary Guys” are bringing all the elements of a good VISUAL installation together...

The Virant Group has been providing essential product extensions for VISUAL since its first release in 1993. These products have been sold to over 500 customers in 21 countries and 44 states. Our extensions have stood the test of time and have evolved substantially from user feedback over the past decade.

TECHNICAL DOCUMENTATION

Our hand compiled dictionaries provide the in-depth VISUAL database information that technical users thirst for and even non-technical users can understand. Furthermore, our implementation tools, available directly from Infor Global Solutions, bring world-class enterprise software implementation methodologies to the average user.

Data Dictionary

The comprehensive Data Dictionary is a must-have tool for working with VISUAL data.

- Gain valuable insights into VISUAL for report writing, importing, and exporting
- Easily map out queries

Includes all standard VISUAL functionality plus the most of the optional modules.

Reports Dictionary

The Reports Dictionary is essential for users who wish to understand the internal structure of VISUAL reports.

- Allows casual users to quickly browse through all reports without extensive knowledge of the software
- Helps you to understand the origin of report data

See all available formatting specifications, input items, variables, and formulas for each report.

UTILITIES & APPLICATIONS

Our utilities and applications are developed directly from user suggestions over the years. Our utilities help automate otherwise mundane tasks with a turn-key solution. They are written specifically for VISUAL and are plug-n-play. Our applications do not require additional drivers, no ODBC connections, no additional runtimes needed, and offer the same look and feel as VISUAL.

V-Launcher

With V-Launcher you can quickly setup routine VISUAL tasks for daily processing and forget about it.

- Save time each day by automatically processing routine tasks in VISUAL
- Schedule VISUAL tasks by day, week, month, and time
- Run multiple instances

eDictionary

eDictionary enables your staff to quickly use reports as decision management tools, without having an intimate knowledge of the VISUAL database.

- Reduce IT support for end user ad-hoc queries and reports
- Many time-saving features

The eDictionary presents common baseline information from the VISUAL database, hiding more detailed and esoteric data.

V-Ferret

A must have for VISUAL users who have encountered issues like conflicting reports, unexpected month end results, and missing data. Ferret out erroneous and inconsistent data with predefined tests.

- Increase your confidence that VISUAL data is accurate
- Easily get to the root of data changes
- Data is not changed but a recommended course of action is given

Purchase the optional annual subscription and receive additional tests every quarter at no cost.

Sign up for a free V-Ferret Webinar on our website!

V-Closer

V-Closer automatically logs out users from VISUAL after a specified period of inactivity.

- Free up concurrent licenses
- Improve security

Administrators can customize each workstation with different shutdown settings. Specify VISUAL to shut-down by time of day or number of minutes after workstation inactivity.

V-INI Editor

V-INI provides system administrators with a graphical means to edit the visual.ini configuration file.

- Avoid frustration with errors in capitalization, spacing, spelling, etc.
- Easy to browse through each configuration wizard to see which features may be desirable for your company

QRP Interrogator

QRP Interrogator opens report definitions and shows you the internal contents of the file including all input items, formulas, variables, and report format information.

- Makes many report format changes quick and accurate

You can edit page margins, page orientation, page size, font, line properties, and field properties. Save your changes to the existing or to a new QRP file.

Part Inquiry

Part Inquiry provides technical users with extensive search capabilities for parts.

- Avoid creating duplicate part numbers by finding close matches to existing part numbers
- Establish and enforce part number structure throughout VISUAL
- Search for parts based on over 20 attributes using "any" or "all" criteria

For more information about these and other products from The Virant Group, visit our web site at www.virant.com.

THE
FERRET
IS OUT!

THE VIRANT GROUP ANNOUNCES THE RELEASE OF

V-FERRET

for VISUAL *Enterprise*

**Does your Inventory Valuation Report
and Inventory Balance Report
conflict every month?**

**Do you frequently get unexpected
results at month-end close?**

**Do you fear running contra
transactions through VISUAL because
you don't know what might happen?**

V-Ferret is a must have for all VISUAL users who have encountered issues like conflicting reports, unexpected month-end results, and missing data. Accountants and other non-technical users can run predefined tests on the VISUAL database to help ferret out erroneous and inconsistent data.

Infor™ ERP VISUAL Extensions

Data Dictionary

for version 7.0.0

\$940 (USD)*

The Data Dictionary is a must-have tool for working with Infor ERP VISUAL data. This comprehensive product continues to satisfy the technical user's thirst for in-depth database information. Through many revisions over 15 years, this hand-compiled product meticulously documents the internal structure of the Infor ERP VISUAL database.

Benefits

- Gain valuable insight into Infor ERP VISUAL for report writing, exporting, and importing
- Easily map out queries

Features

- Over 1,700 pages in three spiral-bound volumes
- Microsoft SQL Server database centric
- Documents all core components of Infor ERP VISUAL which utilize the standard database
- Relational models diagram the relationships between tables in logical functional areas
- Table of foreign keys sorted by both master and detail
- List of all columns throughout the database
- Defines naming conventions for tables and columns
- List of all Infor ERP VISUAL reports and their respective file names
- Over 600 window maps describe where each data element is stored (*pictured above*)
- Table definitions detail each table's columns, indexes and triggers (*pictured right*)

For more information please go to our web site and click on Products.

VISUAL *Enterprise*™ Extensions

eDictionary

Version 1.0

\$ 295 (USD) *

eDictionary is a predefined set of data groups for the VISUAL database. Using eDictionary enables your staff to quickly use reports as decision management tools, without having an intimate knowledge of the VISUAL database. With it's time saving features, the eDictionary is also a powerful tool for more experienced report writing users.

Benefits

- Users do not need to understand the intricacies of the database to pull out useful information for their reports and ad-hoc queries
- Reduce IT support for end user ad-hoc queries and reports
- Save time normally required to perform tedious table linking, database field decoding, and data mining details

Features

- Each dictionary presents data grouped by the business functions:

Quoting	Receiving
Sales	Shipping
Inventory	General Ledger
Purchasing	Receivables
Work Orders	Payables
- Presents common baseline information from the VISUAL database, hiding more detailed and esoteric data
- All data has been denormalized and therefore does not require linking tables
- Columns have been renamed to present a clear, intuitive understanding of their function
- Column descriptions are available within the eDictionary
- Codes used in the database are decoded into easily understood terms
- Future changes to the VISUAL database are automatically remapped in your existing reports by using an updated eDictionary
- Utilizes an ODBC connection to the VISUAL database

For more information go to our web site and click on Products.

Data Dictionary

for Global Financials

\$ 395 (USD) *

The Dictionary series developed by The Virant Group is a must-have tool for working with VISUAL data. This comprehensive Data Dictionary for VISUAL Global Financials will satisfy the technical user's thirst for in-depth database information.

Benefits

- Gain valuable insight into the VISUAL Global Financials database for report writing or exporting data
- Easily map out queries

Features

- Over 350 pages in lay-flat spiral binding
- Documents the entire VISUAL Global Financials database
- Table definitions detail each table and column with physical attributes, common names and descriptions *(Pictured at right)*
- List of all columns throughout the database
- List of all column domains and enumerations
- Relationships sorted by both master and detail
- Relational models make it easy to find important relationships between tables

Section 2

Part Inquiry

Version 1.0

\$275 (USD)

Part Inquiry enables technical users to query part numbers based on numerous attributes to better manage and avoid duplication of part masters. All parts matching the selection criteria are returned in a list. You can then drill into additional information for each part. Part Inquiry shows up under the Inventory menu and operates similar to Customer Inquiry and Vendor Inquiry.

Benefits

- Avoid creating duplicate part numbers by finding close matches to existing part numbers
- Establish and enforce part number structure throughout VISUAL
- Engineering information empowers users to make decisions without extensive knowledge of VISUAL Enterprise

Features

- Search for parts based on over 20 different attributes using “any” or “all” criteria
- Images and specifications are included for each part
- ECN summary information is available for each part
- Inventory by location information is available for each part

VISUAL Enterprise™ Extensions

QRP Interrogator

Version 1.0

\$95 (USD)*

QRP Interrogator opens report definitions (QRP files) and shows you the internal contents of the file including input items, formulas, variables, and report format information.

Benefits

- Eliminate the tedious task of drilling into each report definition line in Gupta Report Builder to examine or change formats
- Makes many report format changes quick and accurate

Features

- Internal contents of each report definition is shown in a single window
- Edit page margins, page orientation, page size, font, line properties, and field properties
- Save changes to the existing or to a new QRP file
- Report definitions can be written to a text file
- Written in Gupta Team Developer, the same language that VISUAL is written in

Limitations

This utility only reads and writes information stored in the QRP file and as such does not provide information on the source of the data within the database. QRP files define the format and process some information with its built-in function set. If you want that additional information on the origins of report data, please see our Reports Dictionary.

QRP Interrogator was developed for VISUAL 6.3.8 with Gupta Report Builder 1.5. There are no plans to continue development of this product. This product will not work with QRP files created or modified with newer versions of Report Builder.

Support is no longer available for this product.

For more information go to our web site and click on Products.

Infor™ ERP VISUAL Extensions

Reports Dictionary

for release 6.5.1

\$ 645 (USD) *

The Reports Dictionary continues in the same spirit as our popular Data Dictionary, providing in-depth documentation on all the standard reports in Infor ERP VISUAL.

Benefits

- Allows casual users to quickly browse through all reports without extensive knowledge of the software
- Understand where much of the data for a report comes from
- Easily mark up existing reports for desired customizations

Features

- Over 1,400 pages in three volumes
- Details over 475 reports
- See all available formatting specifications, input items, variables, and formulas for each report
- Source data for most input items is given
- Examples of every report detailed included
- Cross reference reports by title, QRP filename, menu path, and functional area

What's New

- 10 new reports added
- Entirely revised for Infor ERP VISUAL 6.5.1 functionality
- Updated and higher quality sample report images

6.5.2 Supplement

A supplement to the Reports Dictionary for release 6.5.1 is available for users of Infor ERP VISUAL 6.5.2. Additional reports in release 6.5.2 are documented in this supplement.

VISUAL *Enterprise*™ Extensions

V-Closer

Version 2.0

\$195 (USD)*

V-Closer automatically closes down VISUAL *Enterprise* after a specified period of workstation inactivity, or at a specified time each day.

Benefits

- Improve security by logging out users who leave their work area with VISUAL running
- Free up concurrent licenses for use by those actively using VISUAL
- Automatically logout inactive users without walking throughout the facility to find those not actively using VISUAL

Features

- Customize each workstation with different shutdown settings
- Can shutdown at a specified time of day or number of minutes after workstation inactivity
- User is given a specified grace period to cancel shutdown after V-Closer activates
- Optional "quiet mode" starts V-Closer automatically

Limitations

When V-Closer is selected to shutdown in inactivity mode, V-Closer is activated only by the screen saver.

For more information go to our web site and click on Products.

Infor™ ERP VISUAL Extensions

V-Ferret

Version 1.1

\$1795 (USD) + SUBSCRIPTION*

V-Ferret is a must have for all VISUAL users who have encountered issues like conflicting reports, unexpected month end results, and missing data. Accountants and other non-technical users can run predefined tests on the VISUAL database to help ferret out erroneous and inconsistent data.

Benefits

- Increase your confidence that VISUAL data is accurate.
- Easily get to the root of all data changes.

Features

- Does not require any technical knowledge of SQL or the VISUAL database structure.
- Look for system errors, data entry errors, procedures violations, data inconsistencies, loopholes and bug exploits in VISUAL.
- Easily run predefined tests on the VISUAL database.
- Save queues of tests to run together for later use.
- Each test has a recommended course of action.
- Flag recurring errors to ignore.
- Print out results in a report.

What's New

V-Ferret now supports SQLBase in addition to Microsoft SQL Server.

Limitations

Requires VISUAL Enterprise 6.3.8 or higher.

Some tests will not work with VISUAL Global Financials.

V-Ferret is not compatible with Oracle or DB/2.

*Base price for single user license. Subscription option extra. Prices subject to change without notice.

www.virant.com

V-Ferret Tests

V-Ferret comes with tests to find:

Accounts Payable

- Un-posted transactions and checks
- Transactions dated and posted in different periods
- Batch types hitting the wrong account
- Credit memos not applied to an invoice

Accounts Receivable

- Un-posted transactions
- Zero balance batches
- Transactions dated and posted in different periods
- Incorrect batch types
- Dates not in predefined periods
- Discrepancies between cash receipts and receivables
- Transactions with totals that do not match the sum of its lines or postings to the control account
- Invoices with paid amounts not equal to the sum of applied payments
- Detail lines incorrectly using control accounts

Cash Book

- Zero balance batches
- Transactions dated and posted in different periods

General Ledger

- Discrepancies between account balance detail and summary amounts
- Chart of account indenture errors

Inventory

- Un-posted distributions
- Transaction dates out of range
- Discrepancies between inventory balance and inventory valuation
- Residual inventory balances
- Part descriptions containing undesirable characters such as " '

Receiving

- Zero balance batches
- Transactions dated and posted in different periods
- Incorrect batch types

Shipping

- Un-invoiced shipments
- Transactions dated and posted in different periods

Work in Process

- Un-posted and incomplete transactions
- Transaction dates out of range
- Incorrect batch types
- Discrepancies between work order cost transactions and total amount posted to the ledger

Subscription Option..... \$ 3 5 9 / y e a r

Purchase our annual V-Ferret subscription and receive additional tests at no additional cost. Subscribers will get automatic notifications when updates are available. Visit our website to check on what tests are in development and their estimated availability.

For more information about V-Ferret or any of our other products and services visit our website at www.virant.com.

VISUAL *Enterprise*™ Extensions

V-INI Editor

Version 1.0

\$95 (USD)*

VISUAL is a highly configurable system with hundreds of behind-the-scenes settings that control the way windows look, behave, and process your business information. Most of these settings are controlled by a file called visual.ini. Since some settings can be global and others are for specific users, this file resides both on the server and on each workstation. Making sure that each file is properly configured is critical to a stable installation. Moreover, a lack of knowledge of these settings can prevent desirable features from being used by your company. These files can be manually edited, however the spelling, syntax, and formatting must be exact for the file to be read successfully by the various VISUAL applications. V-INI Editor is a simple utility that allows systems people to alter the visual.ini file in a graphical way by using configuration wizards.

Benefits

- Avoid frustration with errors in capitalization, spacing, spelling, etc.
- Easy to browse through each configuration wizard to see which features may be desirable for your company
- No need to reference outside material to figure out common settings

Features

- Graphical user interface
- Most common settings are automated with wizards
- Settings are explained in plain English

Limitations

Not every setting can be edited with the V-INI Editor. Many control objects such as display persistence, which is maintained within VISUAL itself. These settings are best not edited in this manner.

For more information go to our web site and click on Products.

E-mail: info@virant.com
www.virant.com

Infor™ ERP VISUAL Extensions

V-Launcher

Version 3.4

\$ 795 (USD) *

Why do routine VISUAL tasks manually when V-Launcher will do them automatically? Use V-Launcher for regularly scheduled processing of predefined VISUAL tasks. Once V-Launcher is configured, it automatically launches.

Benefits

- Save time and money each day by automatically launching routine VISUAL tasks
- Reduce processing delays or omissions by specifying and scheduling exact frequency and times
- Eliminate user selection errors by configuring options once and saving
- Complete turn-key solution, does not require writing any macros
- More reliable than writing custom scripts

Features

- Schedule VISUAL tasks by day, week, month, and time
- Automates the following tasks:
 - Concurrent Scheduler
 - Costing Utilities
 - Inventory Valuation Report
 - Material Requirements Planning
 - Post Manufacturing Journals
 - Generate & Print Invoices (*NEW*)
 - Post A/R Invoice Journals from Invoice Entry Window (*NEW*)
- Supports both actual and standard costing
- Configurable options and preferences of each task are identical to those available in VISUAL
- Mix and match any combination of tasks to run on specified days
- Create multiple task groups for different tasks, schedules or databases
- Generates an audit log file
- Does not use client license until automated tasks are launched
- Password deterrent to prevent unauthorized shutdown

For more information go to our web site and click on Products.

VISUAL *Enterprise* Professional Services

VISUAL Services

The Virant Group is a proven VISUAL service provider that compliments those services from your local Infor affiliate and corporate. Our focus is on customizations, conversions, and specific turn-key services.

We Know Manufacturing

The Virant Group is unique in our ability to provide professional services specifically for discrete manufacturers. We have been doing so since our first VISUAL installation in 1993 (#20). Since then we have taken implementations from software selection, to go-live, and into sustained client support.

We Work With You

You already have top-notch specialists in each area of your company. You even have good cross-functional teams. Your top executive gets what makes your business work and what it takes to thrive in the marketplace. Now you need to hire a consultant for a challenging IT project. Why would you want to work with a consulting firm who only understands your manufacturing business by assembling another cross functional team? We can work with your own cross functional teams to effectively determine what type and level of service makes the best sense.

We Complement Other Services

Your local associate or corporate can best provide basic implementation and training, but problems arise in which standard functionality and basic services do not meet the requirements of a business. In our years of consulting and listening to users' concerns, we have developed unique approaches to solving these problems. We best compliment Infor and your local service providers in the areas of re-implementation, customizations, and conversions.

TURN-KEY SOLUTIONS

TAKE 2

The simple and cost-effective VISUAL database re-implementation.

For more information about the Take 2 and other services and products from the Virant Group please visit our web site at www.virant.com.

The Virant Group
1548 Clemson Drive
Eagan, MN 55122

Phone: 651.688.2317
Fax: 651.688.8043
E-mail: info@virant.com
www.virant.com

The Virant 4D Methodology

Since The Virant Group is a consulting service, and not just a technical provider, we can approach your problems from any angle. Whether you just need a design spec, a third-party software integration, or a full re-implementation, we can tailor our approach to suite your needs.

1 DISCOVERY

Frequently problems with existing systems originate with a lack of understanding of business needs, objectives, and processes, which are unique to manufacturing as well as your individual business. The combination of our expertise and consultations with you help all the stakeholders to better understand the problems and how to best resolve them.

2 DESIGN

We know design can be frustrating, especially when every stakeholder prioritizes their needs first. Using the thorough Assessment and our experience to guide technical decisions, we can deliver a realistic solution that is the best fit for your unique situation.

3 DEVELOPMENT

If you are in need of contract programming we are probably not the best fit. If you need consulting, design, and integration expertise and wish those same people could not just 'talk' but actually 'do', then you have come to the right place.

4 DEPLOYMENT

Making any solution actually work in VISUAL can be a daunting task, whether designed by us or not. Even attaching a third-party product can become vexing to your staff. With our intimate knowledge of VISUAL, we can make the deployment as seamless as possible.

ONGOING ASSESSMENT AND SUPPORT

Your standard VISUAL support will continue to come from Infor and local associates, but we will continue to back-up and assess any service provided to you as needed.

Tangible Results

From full scale applications to small macros, our wide variety of solutions will ensure that you get exactly what your business needs. Nothing more, nothing less.

INTEGRATIONS

As an ERP provider, Infor has produced a variety of robust integration choices, however these only address the tactical layers of integration. Virant brings additional software and consulting to the table to offer a strategic solution.

MACROS

Automate routine tasks in VISUAL such as create PO from external file, calculating customer order totals, or updating part prices.

The possibilities are limitless! Go to www.virant.com to find more solution ideas, white papers, case studies, and samples!

VISUAL CUSTOMIZATIONS

- Window Layout Changes
- Automatic Database Changes
- VISUAL Logic Changes
- Business Rules Enforcement

CUSTOM APPLICATIONS

- Batch Order Printer
- Credit Management Tools
- Part Inquiry
- Time & Expense Manager

Take 2

After years of experience using Infor ERP VISUAL, you have gained invaluable insight into the software. You may find yourself wishing you had this wisdom when you first implemented the software. Perhaps you are in need of a Take 2.

Is Infor ERP VISUAL Working for You?

After using Infor ERP VISUAL extensively, you should ask yourself:

- 1) Are erroneous part numbers, transactions, and financial information in my database causing serious problems?
These items can lead to even more errors in the future.
- 2) Is my database cluttered with old transactions?
Unnecessary records can make reconciliations and troubleshooting difficult, if not impossible.
- 3) Would I like to go back and change IDs on parts, vendors, customers, work orders, etc.?
A logical system of assigning IDs can make record tracking and identification easy.
- 4) Wouldn't it be nice if I could just start over and do a Take 2 with my Infor ERP VISUAL database implementation? **YES!**

Possible Solutions

If you found yourself answering yes to any of the questions above, up until now you only had a few options to consider:

- Re-implement a fresh database from scratch
- Attempt to use the Infor ERP VISUAL utilities
- Use third-party purging or cleansing utilities
- Continue to struggle with your existing database

All of these options have pros and cons, but none in themselves offer a complete solution.

The Take 2 Solution

The Virant Group now has a 'best of all worlds' alternate solution to this dilemma.

Our approach has the benefits of the other options, without the attendant downsides.

Take 2 is a good solution for any company that is growing increasingly dissatisfied with its database, but does not want the expense and inconvenience of re-implementing or buying a new ERP system.

This is a complete guided solution based on our years of Infor ERP VISUAL experience.

The Virant Group
1548 Clemson Drive
Eagan, MN 55122

Phone: 651.688.2317
Fax: 651.688.8043
E-mail: info@virant.com
www.virant.com

Our Unique Approach

The Take 2 approach starts by assuming all the data in your VISUAL database is bad. Then the good data is identified and those elements are lifted out and pumped over to a new, empty database. This is what we call the “bowling pin approach” — we pick up the known good pins and sweep away everything else. This approach has the highest probability that the new database will not be tainted with unwanted, erroneous, or otherwise bad data.

The Virant Group has been rebuilding customer databases using this approach for years. We now have developed the tools and procedures allowing us to offer this highly labor intensive service as a standard, cost effective guided solution that does not require on-site consultations or visits.

Guidelines to Our Approach

- Provide our online Take 2 Conversion Portal to help orchestrate the entire project
- Use many structured, hierarchical scripts so each conversion is reproducible, relying on minimal manual manipulation of data
- Allow several simultaneous connections to over 110 disparate data sources
- Transform data midstream as it is pumped from the old to the new database
- Convert data **without** disabling any triggers or breaking any logical business rules
- Allow massive renaming of data by using spreadsheets that map old to new
- Comprehensive testing after each iteration so you see the **exact results** before committing the new database to your live database
- Weekend and holiday availability for the live conversion to minimize work disruptions

This service is probably not for you if:

- You have a new implementation
- Your database is reasonably free of errors
- You are satisfied with your naming schemes
- You can successfully use the purging utilities
- You cannot risk losing **any** information

The Take 2 Portal

Our online Take 2 Portal is the central hub for all conversion communication and status, and provides everything necessary to complete the project.

- Project Gantt chart and documentation tools
- Comprehensive table-level conversion matrix
- Detailed database preparation and transfer instructions
- Pre-conversion and post-conversion data integrity reports
- Testing document

Database Conversions Made Easy

Ready to Get Started?
