AVIATION

Over a million of our all weather shelters and structures are protecting valuable possessions right now. Because ShelterLogic offers the widest selection of innovative alternatives to the high cost of brick and mortar buildings. We have created the widest range of aviation shelters and structures available anywhere, from canopies and garages

to storage sheds and aircraft hangars in sizes up to 72' wide, 32' high, and in any length. Our total production control makes us the best single source to plan, prototype and produce any aviation structure imaginable – in weeks, not months. We don't just make shelters for all kinds of weather. We make solutions for every customer's need.

AIRCRAFT HANGARS

ShelterLogic provides versatile and economical hangars for all types of smaller aircraft, aerial applicators or gliders. The innovative designs and durable materials of our engineered structures

provide the ultimate storage and runway hangars. They're great for maintenance and repair work, too. And ShelterLogic will also develop custom solutions for your aircraft needs. So get high quality, portable

protection for your major capital investments now. Visit us at www.shelterlogic.com or just call **800-932-9344** for a sales engineer who can initiate a price quote for your building needs.

GARAGES, SHEDS, STORAGE

We make more garages, sheds and storage shelters in more dimensions than anyone else in the industry. Now get the best protection for your airport needs with our proven design, engineering and materials.

PORTS

Our distinctive line of ports provides the protection you need in an open ground-level environment. These ports are ideal for gliders, trailers, vehicles and equipment storage. They're versatile and offer a great value for your shelter dollar.

CANOPIES

Our canopies are easy to assemble, dismantle and store. These light, portable and inexpensive canopies can be used for shade, temporary work spaces, and any storage needs. Extension and enclosure kits are available for all canopies.

AVIATION

ShelterLogic advanced technology makes the difference.

People who know choose ShelterLogic durable shelters and engineered structures. For quality inside and out. And for reliability across the board. Our engineered aviation buildings are available in selected sizes, from 30' to 72' wide, up to 32' high, in any length.

ENGINEERED FOR STRENGTH

Engineered structures

The superior frame technology built into our heavy duty structures and the trussed design of our large buildings is made to withstand severe environmental conditions, including heavy snow loads and high winds.

High yield carbon steel frames

We use only high yield carbon steel tubing which has proven to last twice as long as competitive products in the ASTM B117 salt spray test. Heavy duty structural steel frame

construction is corrosion proof and all weather resistant. Produced in the following diameters and gauges:

- ◆ Pipe diameters: 1" to 2 7/8"
- ◆ Gauges: from 12 to 17. (Pipe lengths for air freight transportability.)
- ◆ Trussed ribs, double trussed

ribs and double rails are built for large engineered structures, determined by size, rib spacing, snow and wind loads.

Durable cover materials

Our coverings are designed using the most advanced and durable UV treated materials on the market. We offer a choice of coverings based on your budget and the application of your shelter or structure.

DESIGNED FOR VERSATILITY

Versatile anchoring systems

Our all weather shelters and heavy duty engineered struc-

tures can be anchored securely to any surface: gravel, asphalt, dirt or cement.

Experienced technical support

Our shelters and structures can be quickly and easily installed by inexperienced personnel without special tool requirements. We provide expert technical support, 7 days a week. Our supervisors can make on-site ShelterLogic installation, train a crew to install or assist in the building of our engineered buildings.

Totally tear-resistant, UV-protected waterproof fabric gives years of protection. Cold crack tested to -55° F.

Innovation and performance

Our engineered structures:

- ◆ Are easy to assemble. No special tools are required.
- ◆ Add years of life to your investments, preventing fading, rust and dirt.
- ◆ Cover large work areas in the field.
- ◆ Are expandable, easy to relocate. Simple to move, easy to dismantle.
- ◆ Are made of fire retardant material that is fire rated.
- ◆ Are affordable, competitively priced quality products.
- ◆ Use heavy duty galvanized steel frames.

◆ Are made in our company-owned plants for quality assurance.

- ◆ Shipped worldwide.
- ◆ Loaded with options:
 - Light-enhancing clear top panels.
 - Variety of door styles.
 - Ventilation systems.
 - Roll-up door kits.

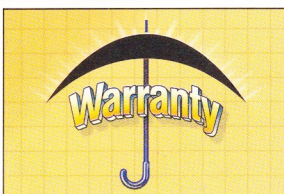

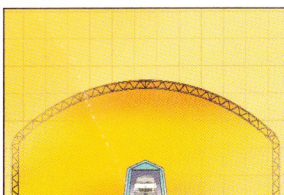

Industry's strongest guarantee

ShelterLogic offers a 30-day money back guarantee on all shelter products with 1, 2, and 15 year limited warranties available.

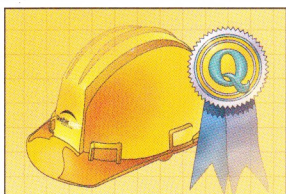

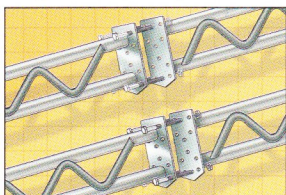

Engineered structures have galvanized steel crossrails to assure structural integrity and superior stability in all directions.

FABRIC	DESCRIPTION	OZ. PER SQ. METER	LIFE EXPECTANCY	WARRANTY
7.5 UV	Standard Grade -UV treated, color dyed, low density, polyethylene outer layer -Laminated over high density, polyethylene-woven mesh core -Inner layer of white L.D.P.E. for ambient light reflection -Solution for short term or temporary applications	250 lbs.	5-8 years	1 year
9.0 UV	Premium Grade -UV treated, color dyed, low density, polyethylene outer layer -Laminated over high density, polyethylene-woven mesh core -Inner layer of white L.D.P.E. for ambient light reflection -Solution for more permanent sheds, garages, storage	300 lbs.	7-10 years	2 years
10.0 UV FR	Industrial Grade -UV treated, color dyed, low density, polyethylene outer layer -Laminated over high density, polyethylene-woven mesh core -Inner layer of white L.D.P.E. for ambient light reflection -Fire retardant treatment meets or exceeds NFPA-701L -Resistant to UV weathering and fungus/microbial attacks -Cold crack tested to -55° F	350 lbs.	20 years	15 years (Prorated)
Intertape 12 UV FR	Super Premium Grade -UV treated, color dyed, low density, polyethylene outer layer -Laminated over high density, polyethylene-woven mesh core -Inner layer of white L.D.P.E. for ambient light reflection -Fire retardant treatment meets or exceeds NFPA-701L -Solution for harshest elements and toughest applications	400 lbs.	20 years	20 years (Prorated)

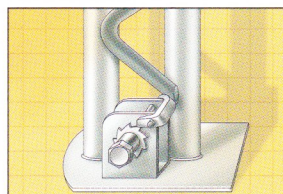

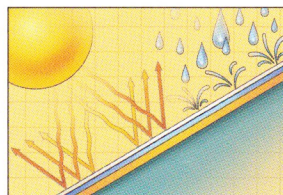

We cover your needs in every size and style, from canopies to garages and sheds to large custom engineered structures.

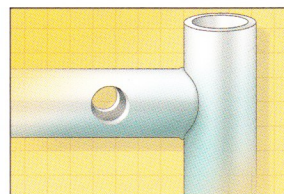

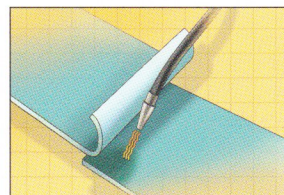

We have the industry's best warranty: a full 15 year, prorated, limited warranty and a 30-day money back guarantee.

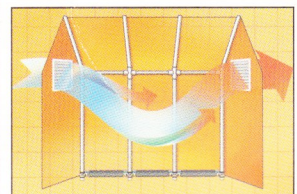

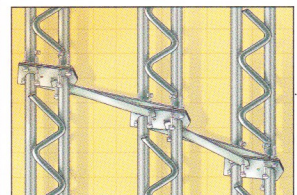

We keep quality high and costs low by making our all weather shelters and structures in our company-owned plants.

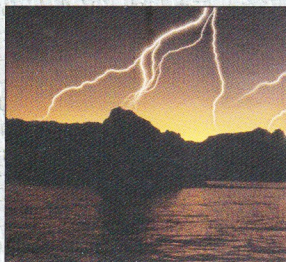

Torque wrench maintains the cover tension of our engineered structures with precise PSI control.

Triple-coated rust and corrosion-proofing leaves no exposed raw steel, making frames ultra durable.

Ventilation system greatly improves air circulation in our shelter and structure models that are fully enclosed.

The nation's leader in all weather shelters.

Our unique capabilities provide custom-tailored solutions to meet your aviation needs, with natural lighting, unobstructed space and superior ventilation for year-round use. Using the most innovative designs, excep-

tionally durable materials, and exacting workmanship, we produce diverse lines of engineered structures and shelters in a variety of standard colors, shapes and sizes, as well as custom-built options for any

aviation application. From our shelters designed for aircraft storage and maintenance to our big structures that can house and maintain multiple planes, we give you more value for the things you value most.
